ORDER NOW...

A supply of library cases is now available to preserve your issues of the Journal of Cellular Plastics. Each case holds 12 issues.

These attractive cases are finished in red simulated leather and stamped in gold leaf.

You may order a library case by filling in the coupon on this page. Handling and mailing costs are included in this price.

M. Martin

CLASSIFIED ADVERTISING

POSITIONS OPEN

Technical Manager (Polymeric Foams Chemist)

Growth opportunity with new division of medium-sized AAA-1 multiplant plastics manufacturer in Upstate New York. A demanding position, with responsibility for organization and direction of R and D process control, development of new products and processes, chiefly polymeric foams, in a creative environment, with challenge of technical capability. Requires B.S. degree in Chemistry or Chemical Engineering, top-third grades, and five to twelve years experience in plastics converting or equivalent study. Experience in foams, organic coatings, supervision of professionals particularly helpful.

Send complete resume including salary history and requirements to: Box 1001, Journal of Cellular Plastics

CLASSIFIED ADVERTISING RATES

$15.00 per column inch. No agency commission or discount. Closing date: First day of month, preceding month of issue; Display size ads, the 15th preceding month of issue. Send copy to: Classified Dept., Journal of Cellular Plastics, 750 Summer St., Stamford, Conn. (203)325-1397.

Now available . . .

Detailed study of the distribution methods and marketing patterns of companies manufacturing synthetic organics. Market forecasts for chemicals through 1968.

MARKETING GUIDE for the U.S. SYNTHETIC ORGANIC CHEMICALS INDUSTRY

by Dr. N. H. Giragosian, Director of Marketing Research, General Aniline and Film Corp., New York

Data based on hundreds of individual interviews with marketing executives in chemical companies. Shown is how and why companies integrate forward and backward, economic factors affecting choice of distribution channels, and sales trends and future potential for chemicals in each of the markets analyzed.
